

## Unplasticized polyvinyl chloride (PVC-U)

**PVC-U or uPVC or Rigid PVC** is often used in the building industry as a low-maintenance material, particularly in the United States and in the UK where it is known as vinyl, or vinyl siding.

The material comes in a range of colors and finishes and is used as Industrial Pipes, drainpipes, gutters and downpipes, replacing the use of cast iron and other materials for plumbing and drainage
